Abstract not available for JP60222486

Abstract of corresponding document: CH643265

Penem compounds of the formula I are described. The definitions of the substituents X, Y and Z can be taken from Patent Claim 1. They can be obtained by cyclisation of compounds of the formula II in which R<"> is an ester protective group, followed by removal of this protective group in cases where Z denotes hydrogen. The compounds have a good activity as antibacterial agents.
